

Bajío Corridor — \$200M Industrial Real Estate Assessment

The Bajío corridor remains the premier nearshoring destination for mid-to-high-value manufacturing, but faces acute energy-infrastructure constraints that will define tenant viability over your 36-mon

Classification	Confidential
Calibration	probable (50-60%)
Produced	2026-05-18T16:00:00Z
Sources	7
Brief ID	bajio-v3-20260518

Headline Judgments

At least one sub-corridor will experience a material power disruption event (>4 hours unplanned CFE outage) within 12 months

(-%)

Source: · Admiralty

Aguascalientes has the lowest per-capita water availability in the Bajío (1,200 m³/year vs 3,500 national average)

(-%)

Source: · Admiralty

Guanajuato is too risky for new industrial capital until Q4 2026 at earliest

(-%)

Source: · Admiralty

USMCA review (July 1, 2026) is the single largest macro risk to the Bajío thesis

Action:

Risk map

Watch Items

Indicator	Trigger	Signal
Guanajuato monthly attack count	>100 attacks/month for 2 consecutive months	Immediate capital flight — pause all Bajío commitments
Kalshi KXTARIFFRATEPRC >9% strike price	Price rises above \$0.20	Market pricing in higher tariff risk — hedge more aggressively
CFE 400kV line construction progress	Q4 2027 target slips or advances	Power reliability timeline shifts
	Q3 2026 release	

CONAGUA water availability update		Definitive water risk assessment for Aguascalientes
Cenagas pipeline auction results	June 2026 release	Natural gas access for Querétaro manufacturing

Trade Positions

Instrument	Strike	Price	Rec.	Sizing	Rationale
KXTARIFFRATEPRC				\$—	...
KXTARIFFRATEPRC				\$—	...
EWV				\$—	...

Framework Gaps

GAP: No verified CFE outage frequency data for Aguascalientes industrial parks

Cannot quantify power disruption probability with confidence

Next step: Commission CFE substation reliability report (~\$15K, 4-week lead)

GAP: No verified natural gas pipeline capacity utilization for Querétaro

Cannot assess tenant production risk from gas curtailment

Next step: Request Cenagas auction results (June 2026 — publicly available)

GAP: No Mexico-specific prediction market contracts for Bajío industrial real estate risk

All hedges are proxy instruments — imperfect match

Next step: Monitor Polymarket for user-created contracts; propose synthetic construction

Prioritized Actions

Priority 1: Execute Kalshi KXTARIFFRATEPRC hedge — \$125K notional across >9% and >51% strikes (~\$17K cost) · 7 days

Priority 1: Commission CFE substation reliability report for Aguascalientes · 30 days

Priority 2: Commit first \$50-75M to Querétaro (El Marqués with private water treatment) · 90 days

Priority 2: Request Cenagas pipeline auction results and CONAGUA water availability update · 60 days

Priority 3: Do not commit to Guanajuato or Aguascalientes until CFE report and water-rights audit return · 90+ days
