

LLOYD'S OF LONDON · LEO GROUND-STATION INSURANCE

Who is actually insuring ground stations for LEO networks out of Lloyd's

Bottom line up front. There is no single Lloyd's syndicate that writes a stand-alone “LEO ground-station” policy. Ground stations are insured at Lloyd's through a stack of four parallel risk classes — space third-party liability, terrestrial property/all-risks, cyber, and political violence/terrorism — placed by specialist space brokers across overlapping but distinct syndicates. The space-class consortia (Brit-led Lift Space, Atrium 609, Hiscox MGA, Beazley 623/2623, Munich Re Syndicate 457, Tokio Marine Kiln, Chaucer, Canopus) provide the satellite-side cover; the ground-asset perils sit with property, cyber, and PV/terror syndicates in the same buildings.¹

1. How LEO ground-station risk actually places at Lloyd's

Standard property and casualty policies typically exclude extra-atmospheric losses, while pure space policies stop at the antenna interface. Brokers therefore manuscript a multi-class programme that follows the asset across the link.² The four layers are:

Risk layer	What it covers on a LEO ground station	Where it sits at Lloyd's
Space TPL / space-segment	Third-party liability for harmful RF interference, spectrum bleed, or “noncontact” signal-loss claims arising from ground-station operation; extensions for damage to neighbouring infrastructure.	Lift Space (Brit + Hiscox MGA + 16 follower syndicates); Atrium Space Consortium (Syndicate 609); Beazley 623/2623; Munich Re Syndicate 457; Tokio Marine Kiln; Chaucer.
Terrestrial property / all-risks	Physical damage to dishes, radomes, modems, electronics, power and HVAC plant from fire, storm, flood, equipment breakdown; business interruption from site loss.	Same syndicates' property & specialty stamps (Beazley, Brit, Canopus, Tokio Marine Kiln, Munich Re 457, Aegis 1225, Hiscox property treaty), led by international property underwriters — not the space box.
Cyber & space-segment cyber	Signal jamming, spoofing, unauthorised command override, modem-wiper events (KA-SAT precedent), system-restoration funds, business interruption from malicious outage.	Lloyd's cyber market under LMA5567A/B war-exclusion wordings (Beazley, Brit, Chaucer, Hiscox, CFC, Tokio Marine Kiln, Munich Re 457); space-segment cyber requires manuscript wording bridging space + cyber boxes.
Political violence / terrorism	Sabotage, terrorism, strikes/riots/civil commotion, and (where bought back) war on land cover for fixed gateway sites — especially outside ITAR/Five-Eyes geographies.	Lloyd's PV/terror syndicates (Hiscox, Chaucer, Beazley 623, Canopus, Talbot Syndicate 1183, Tokio Marine Kiln, Aegis 1225) — not the space box.

Implication: when an operator says “our Lloyd's policy” on a ground station, they usually mean a programme placed across two to four of these classes by the same broker, often with the space lead's name on the slip even though the property and cyber capacity sits behind it.

2. Named Lloyd's space leads relevant to ground-segment programmes

These are the Lloyd's vehicles whose space underwriters either lead or follow LEO ground-station-adjacent risks today. Capacity and named underwriters are pulled from current carrier disclosures.

Vehicle	Lloyd's syndicate	Lead role	Capacity / line	Named space lead
Brit Global Specialty — Llift Space consortium	Syndicates 2987 / 2988 (Brit), plus 16 follower syndicates	Lead carrier on Llift Space; primary capacity for NewSpace / LEO programmes including ground-segment endorsements	Llift Space: US\$25M / risk consortium line; Brit own line larger on bespoke programmes	Gary Brice (Head of Marine & Space, Brit Global Specialty)
Hiscox London Market — Hiscox MGA Space	Underwrites on behalf of multiple Lloyd's syndicates (incl. Hiscox 33)	Co-lead on Llift Space; primary writer for satellite operators, telecom, earth-imaging, NewSpace	US\$35M any one risk	Pascal Lecointe (Line Underwriter), Michele Biagi (Deputy), Heike Bienvenu
Atrium Underwriters — Atrium Space Insurance Consortium	Syndicate 609	Long-standing space lead at Lloyd's; launch + in-orbit; programme participation on constellation business	Consortium capacity not publicly disclosed; historically a top-3 Lloyd's space line	London-based underwriting team with dedicated satellite engineer (Canada)
Beazley — Aviation & Space, London Market	Syndicates 623 / 2623 / 3623	Asset physical damage, space TPL + associated aerospace liabilities, BI, comprehensive covers for NewSpace start-ups	Up to US\$15M–20M per spacecraft; US\$100M for liability	Denis Bensoussan (Head of Space); Anthony Collins (Claims Focus Group Leader — Aviation)
Munich Re Specialty — Global Markets Syndicate	Syndicate 457 (rebranded 2016; ex-Watkins)	Space line sits inside MRS-GMS; also writes cargo, cyber, energy, financial lines, liability, political risks, specie, trade credit, transport, war	Not publicly disclosed per-risk; significant follow capacity	Stephanie Ogden (CEO, MRS-GMS); space underwriter team under MRS-GMS structure
Tokio Marine Kiln	Syndicate 510 (TMK 510); Syndicate 1880 (TMK 1880)	Aerospace & Space line; writes satellite, launch, in-orbit, plus aerospace product/manufacturer liability that bridges into ground equipment	Top-5 Lloyd's aerospace platform by stamp capacity	Aerospace & Space team within TMK Lloyd's box
Chaucer (China Re-owned)	Syndicate 1084	Space line; aviation & aerospace; marine; treaty — relevant follower on Llift Space consortium and on cyber/PV stacks	Stamp capacity ~£1.3bn group; space line is a specialty sub-segment	Chaucer Space & Aviation team (boxes 15/16/16A & 140/140A/141A in the Room)
Canopus	Syndicate 4444 (Canopus main); Syndicate 1861 (Canopus Capital)	Aerospace, space, property, cyber and PV/terror lines — the rare house that can put all four ground-station perils on one paper	Top-10 Lloyd's stamp by capacity; multi-class follow on LEO programmes	Canopus Specialty & Aerospace teams
Convex Insurance (Lloyd's syndicate + Bermuda/London co.)	Syndicate 1200 (Convex SY1200)	Aerospace line opened 2021; selectively writes space and ground-segment-adjacent risks alongside aviation	Selective follower; not a primary space lead	Convex Aerospace team
Inigo (announced acquisition by Radian, Sep 2025)	Syndicate 1301	Property catastrophe, specialty, aerospace; selective follower on ground-station property + PV layers	Selective follower	Inigo Aerospace & Specialty

Note. Atrium Insurance Agency Limited completed its sale to Enstar in March 2025; the Space Consortium and Syndicate 609 platform continue operating in the Room. AXA XL's space team — previously a dominant Lloyd's-adjacent lead under Chris Kunstadter — was scaled back in 2024; Kunstadter now runs Triton Space LLC as a consultancy. That capacity gap is one reason Llift Space and Atrium remain the most cited LEO leads in current placements.³

3. Brokers placing LEO ground-station business into Lloyd's

Four firms dominate the space-broking community that touches Lloyd's. None publishes a stand-alone “ground-station” product, but each places the multi-class stack described above and is the route through which a LEO operator (Starlink, Kuiper, OneWeb/Eutelsat, Iridium, Globalstar, Telesat, the GaaS providers AWS Ground Station, KSAT, Viasat RTE, SSC, Atlas Space Operations) reaches Lloyd's capacity.

Broker	Lloyd's reach for LEO ground-segment	Named team / contact
Marsh Specialty — Space practice	Active in space since 1977; placed manuscript wordings including a NASA SLS bespoke solution; largest stamp footprint across Lloyd's aerospace / space syndicates. Places programmes that package space TPL with terrestrial property and cyber.	Marsh Specialty Space team, London. (In 2025 Marsh sued Willis over aerospace-team hires — indicates how concentrated and competed this small bench is.)
Aon — International Space Brokers (ISB)	Self-describes as the world's only broker dedicated exclusively to space; places ~35% of global space premium; eight of the world's top-20 satellite operators are clients. The ISB structure is the most likely route for a tier-1 LEO operator's bundled Lloyd's placement.	ISB offices: London (Aon Centre, Leadenhall), Washington-area, Paris, Madrid
Gallagher Specialty — Aerospace	Issues quarterly “Plane Talking” market updates on space; aerospace CEO Peter Elson is principal contact. Active on LEO constellation placements and on the rising volume of ground-handling / ground-segment risk as LEO uptake grows.	Peter Elson (CEO Aerospace, Arthur J. Gallagher UK)
WTW (Willis Towers Watson) — Aviation & Space	Long-standing Lloyd's aerospace and space broker; hosts the annual Willis Aviation & Space Conference. Strong on programme design across launch + life + ground assets; competing directly with Marsh after 2025 team movements.	WTW Aviation & Space, London
Price Forbes (Ardonagh)	London & Bermuda placement support specifically for launch, satellite constellations, in-orbit servicing, space tourism, national space programmes, GEO and LEO. Positions as the wholesaler securing specialist Lloyd's capacity for retail brokers.	Price Forbes Space practice, London
McGill & Partners	Independent specialist designed for “large clients and complex risks.” Active in space and aerospace as part of its Lloyd's specialty franchise; relevant for bespoke LEO ground-station / gateway-network programmes.	McGill & Partners Specialty, London

4. Market dynamics specific to LEO ground stations

- Capacity is tight and shrinking. Lloyd's space-market capacity has not returned to 2018 levels; the 2023 loss year produced the worst space-line result in 20+ years and pushed several insurers out. A handful of start-up space syndicates were lining up to begin underwriting in late 2025 — the first material new entrants in years.⁴
- LEO operators self-insure the satellites — but not the ground. By Gallagher's count, ~99% of LEO satellites are uninsured; LEO constellations rely on in-orbit redundancy. That economics is inverted on the ground: a single gateway loss is not redundant in the same way, so ground-station property, cyber, and PV are where the actual buy is for LEO networks. Underwriters see the ground-segment as the more buyable, higher-frequency exposure.⁵
- Cyber is the live concern. The 24-Feb-2022 KA-SAT attack — ground-network intrusion via a misconfigured VPN appliance, lateral movement to a management segment, modem-wiper deployment — remains the canonical LEO/MEO ground-segment cyber loss scenario in London. It is the reason Lloyd's pushed through the LMA5567A/B state-backed cyber war exclusions effective March 2023, which now sit on every cyber slip touching satellite ground infrastructure.⁶
- Space-segment cyber is the manuscript product to ask for. Coverage that “integrates the satellite, its ground infrastructure, and the communication links as a single unified system” with system-restoration funds and BI for malicious-outage scenarios is the form most relevant to a LEO gateway operator. It is written by space-and-cyber crossovers at Hiscox, Brit, Beazley, Tokio Marine Kiln, and Munich Re 457, with Marsh and Aon ISB as the principal placing brokers.⁷

- PV/terror is location-driven. Demand spikes for gateway sites in higher-threat geographies (LATAM, MENA, sub-Saharan Africa, Pacific island nodes). Hiscox, Chaucer, Beazley 623, Canopus, Talbot 1183, Tokio Marine Kiln, and Aegis 1225 are the typical Lloyd's lines on the PV/terror stack for fixed satcom sites — not the space box.
- Brokers, not syndicates, hold the relationship. Because no single Lloyd's vehicle writes the whole ground-station risk, the broker is the integrator. The four firms that effectively control LEO ground-station placement at Lloyd's are Marsh, Aon ISB, Gallagher, and WTW, with Price Forbes and McGill & Partners as specialist wholesalers.

5. Implications for Concentric / KESSLER SENTINEL

Three takeaways for the Lloyd's space-syndicate go-to-market that sits behind KESSLER SENTINEL and the LEO ground-station physical-security line:

- The buyer of LEO ground-station risk intelligence at Lloyd's is the broker, not the syndicate. The decision to bind a multi-class stack — and therefore the demand for site-level physical security, cyber posture, and threat-geography data — aggregates inside Marsh, Aon ISB, Gallagher, and WTW. Engagement priority should follow that order, with the specialist wholesalers (Price Forbes, McGill) as a faster route in for bespoke programmes.
- The named-underwriter map is small enough to work directly. The Lloyd's ground-station-adjacent space community is effectively a dozen named people: Brice (Brit), Lecointe / Biagi / Bienvenu (Hiscox MGA), Bensoussan (Beazley), the Atrium 609 lead, the TMK 510 aerospace head, plus Ogden's MRS-GMS team. A targeted briefing programme — KESSLER SENTINEL outputs + ground-station physical-security capability deck — can cover the core leads in a single London week.
- Cyber + PV/terror are the higher-conviction wedges. Pure space-class business is soft, capacity-constrained, and dominated by long incumbents. The growth wedge that touches LEO ground stations is in space-segment cyber and PV/terror for fixed gateway sites — both of which sit in different Lloyd's boxes (Hiscox, Brit, Chaucer, Canopus, Talbot 1183, Aegis 1225, TMK 510, Munich Re 457) and therefore extend Concentric's addressable underwriter list well beyond the “space-only” bench.
