

Bajío Corridor — \$200M Industrial Real Estate Assessment

The Bajío corridor (Guanajuato–Querétaro–Aguascalientes) remains the premier nearshoring destination for mid-to-high-value manufacturing, but faces ****acute energy-infrastructure constraints**** that wil

Headline Judgments

We assess a **60% probability (Sherman Kent: 5/6)**** that at least one sub-corridor will experience a material power disruption event (>4 hours unplanned CFE outage) in the next 12 months.**

(-%)

Source: · Admiralty

USMCA review and tariff risk are the dominant macro variables, with Kalshi markets pricing a **13% probability of a >9% tariff rate by July 2026**** (most liquid contract).**

(-%)

Source: · Admiralty

****Directional claim only – no verified aggregate data available.** - ****Supply chain disruption:** 12-month probability of a 24+ hour highway blockade (León–Silao–Irapuato corridor) is ****40% (Kent: 4/6)****.****

(-%)

Source: · Admiralty

Kalshi KXTARIFFRATEPRC markets indicate: - **13% probability of >9% tariff rate**** (most liquid contract, \$19,646 volume).**

(-%)

Source: · Admiralty

- **12% probability of >51% tariff rate**** (thin contract, \$1,724 volume).**

Framework Gaps

Prioritized Actions

Priority 1: Do not acquire in León-Silao without a dedicated on-site security contract (mid-six-figure annual cost). Prefer Irapuato or Celaya for lower extortion incidence. · varies

Priority 2: Querétaro is the lowest-risk sub-corridor for security, but water access must be contractually guaranteed in lease agreements. Prefer El Marqués industrial parks with private water treatment plants. · varies

Priority 3: Aguascalientes requires a water-rights audit before acquisition. Expect tenants to demand backup water storage (mid-six-figure capital cost per 100,000 sq ft). Do not proceed without a CFE reliability letter of intent for the specific substation. · varies

Priority 4: Execute >9% and >51% positions immediately. Monitor Kalshi volume for >18% contract – if volume exceeds \$5,000, add \$25,000 notional. · varies

Priority 5: 1. **Immediate (0-30 days):** Execute Kalshi KXTARIFFRATEPRC hedges (>9% and >51% strikes) – \$22,750 estimated cost. · varies

Priority 5: 2. **Short-term (30-60 days):** Commission CFE substation reliability report for Aguascalientes – \$15,000. · varies

Priority 5: **3. **Medium-term (60-90 days):** Engage local security consultancy for Guanajuato and Querétaro – \$8,000 annual subscription.** · varies

Priority 5: **4. **Ongoing:** Monitor Cenagas pipeline capacity auction results (June 2026) and CONAGUA water availability update (Q3 2026).** · varies

Priority 5: **5. **Deal-specific:** For any acquisition in Aguascalientes, require water-rights audit and CFE reliability letter of intent. For Guanajuato, require on-site security contract.** · varies

Priority 5: **Classification: CONFIDENTIAL** · varies

Priority 5: **Next scheduled update: 18 June 2026** · varies

Priority 5: **Contact: Open Claw Mexico Desk – [REDACTED]** · varies
